

Hard links and Symbolic link

Create a new directory in your home directory by name "Group-RollNumber-FirstName"

For ex: "**c1-12345-abcd**"

In that directory create 5 files by name, file1.txt - file5.txt

1. Write some contents in every file.
2. Create a **hard link** for **file1.txt** by name **hl_file1.txt** in same directory.
3. Give command `ls -li` , and check inode number of **file1.txt** & **hl_file1.txt**
4. Verify the contents in **hl_file1.txt** is reflected or not.
5. Now add some lines in **hl_file1.txt** and see in the file1.txt & verify.
6. Now delete the original file, file1.txt and again check hl_file1.txt
7. Create a **hard link** for **file2.txt** by name **hl_file2.txt** in **home directory**.
8. Do the same operations for file2.txt
9. Create a **symbolic link** for **file3.txt** by name **sl_file3.txt** in same directory.
10. Add some new lines in **sl_file3.txt** and see the **file3.txt**.
11. Give command `ls -li` , and check inode number of **file3.txt** & **sl_file3.txt**
12. Now delete the original file and see the output.
13. Create a **symbolic link** for **file4.txt** by name **sl_file4.txt** in **/tmp**
14. Do the same operations for file4.txt
