

1. Write a Menu driven Shell Script which will give following functionality :

```
echo "File and Directory Operations Menu"
echo "-----"
echo "1. List files and directories in the given path"
#list the files from given path
echo "2. Display information about a file or directory"
# list the metadata of file/dir of given path
echo "3. Create a directory"
# take a dir path and name from user
echo "4. Create a file"
# take a file name and create it at given path and add some contents in it.
echo "5. Copy a file or directory"
# take a source & destination path from user & copy file/directory ( add logic
to identify file or directory)
echo "6. Move/Rename a file or directory"
# take a file/dir path and move or rename accordingly
echo "7. Delete a file or directory"
# take a file/dir path and accordingly delete the file/dir
echo "8. Exit"
```

2. Write a Menu driven shell Script which will create a database for addressbook & functionality as below.

From User take

1. Name
2. Email
3. Mobile Number

```
echo "Address Book Menu"
echo "-----"
echo "1. Add a new contact"
echo "2. View all contacts"
echo "3. Search for a contact"
echo "4. Delete a contact"
echo "5. Count of contacts"
echo "6. Exit"
```
